DUST SUPPRESSION HOPPER SYSTEMS

SUSTAINABLE DUST-CONTROL SOLUTION FOR SAND LOAD-OUT

Sustainable Operation – No electricity required

Worldwide Applications

Suitable for Rail, Truck, and Barge Load-Out

Designed for High Volume Sand Load-Out

How Does The Dust Suppression Hopper Work?

The Dust Suppression Hopper is installed under a feed point where it can be suspended above the target. A small degree of natural agitation as the hopper is filled helps exclude air from the material being transferred. At the point of loading, or transferral, the DSH System concentrates the discharge of granular material as a solid column through free air into any target repository including trucks, rail cars, and stockpiles. The DSH System will reduce hazards and health risks.
